

Presenting the all **NEW WASTE KING**

SUPER HUSH MODEL SH7000

*with* **LIQUIFYING ACTION**  
*and the* **MAGIC SOUND BARRIER**

# TWO BIG, NEW, **EXCLUSIVE** DIFFERENCES

## MAKE THE ALL **NEW WASTE KING** SUPER HUSH

### 30% **FASTER** . . . 95% **QUIETER!**\*

#### BIG DIFFERENCE #1

### *Liquifying Action*

*After years of intensive research, **WASTE KING** brings you a totally new concept of garbage disposal . . . **Liquifying Action!** **Liquifying action** disposes of garbage 30% faster than any other method.*

**HERE'S HOW LIQUIFYING ACTION WORKS:** The first three steps are as with any garbage disposer: Turn on the cold water, flip on the switch, put all food waste down the drain (and the **NEW WASTE KING SUPER HUSH** can be fed continuously, of course.)

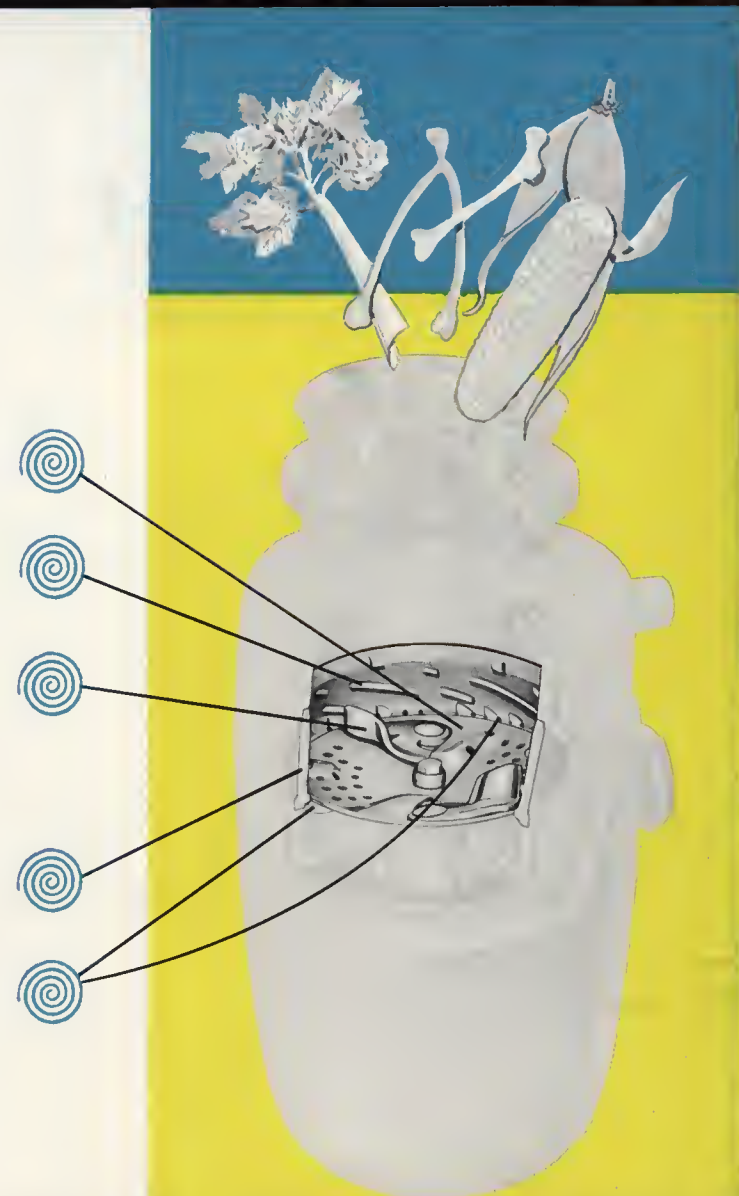

Then, the garbage falls onto **WASTE KING'S** new and exclusive Super-Speed, hard steel **CENTRIFUGE TABLE** which moves garbage toward the wall of the liquifying chamber with tremendous centrifugal force.

Food waste is directed downward by the **CHANNELING RIDGES**, precision designed for high speed, efficient flow.

These forces concentrate garbage at the table edge where the exclusive new precision engineered **SWIVEL FLOW-CONDUCTORS** gather and impel the precise amount of garbage for continuous, top speed liquifying. Swivel action prevents jamming because it automatically and instantly releases any particles that might slow the action. This lightning fast process is continued until even the toughest and hardest chunks of bones or garbage are completely liquified.

The two Swivel Flow-Conductors hurl the garbage against the protruding tool steel ribs of the **ATOMIZER RING** with such great speed and force that it is instantly atomized into liquified waste which flows silently down the drain to sewer or septic tank.

Fibrous and stringy food waste is swiftly cut into minute particles by a high speed **SURGICAL STEEL BLADE** rotating underneath the **CALIBRATING EXIT SLOTS**. This is **WASTE KING'S** guarantee of protection for plumbing lines. In fact, the liquified garbage solution swirling through the pipes actually helps sweep them clean and lengthens their life!

## BIG DIFFERENCE #2 MAGIC SOUND BARRIER

*\*Now, the "sonic boom" of garbage disposing is banished from the kitchen forever! WASTE KING has removed fully 95% of the irritating noise of old fashioned garbage grinders. No more nerve shattering, grinding, crunching, grating, crashing, clanking din.*

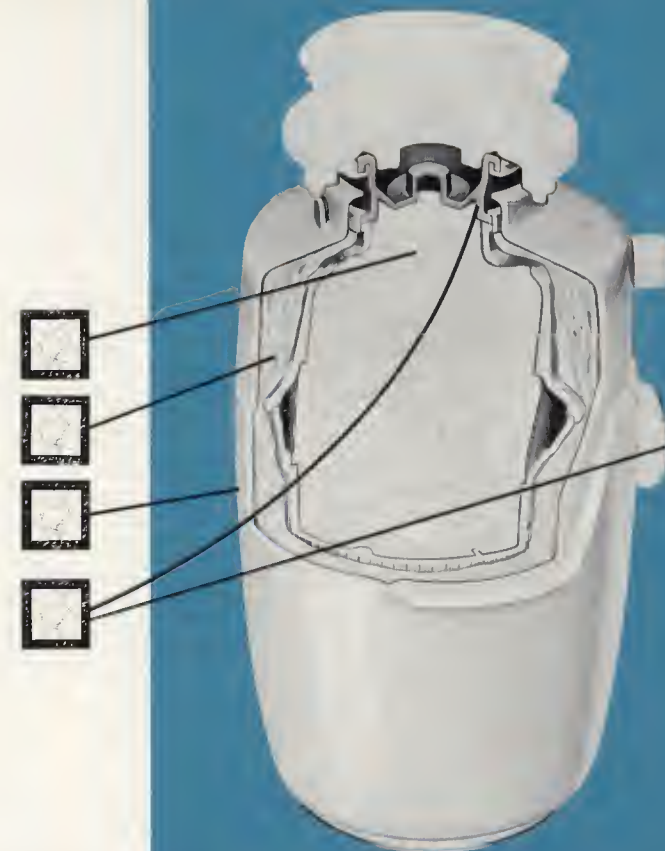

HERE IS THE MAGIC SOUND BARRIER! The durable, hard steel **LIQUIFYING CHAMBER** is the working core of the all new **WASTE KING SUPER-HUSH**.

Surrounding this is the new, exclusive, thick **SILICAN SOUND SPONGE**. This Fibreglas insulation soaks up noise resulting from the liquifying process. Remaining sound is literally bounced back into the Silican Sponge by the new, sculptured, super-strong **PLASTIC OUTER SHELL**, which acts as a one way sound mirror.

Vibration noises are stopped at the sink and pipe connections because **WASTE KING'S** new, improved blue rubber **SUPER HUSH CUSHIONS** and **DRAIN CONNECTOR** prevent metal to metal contact. Sound can't be "telegraphed" throughout the house by vibrating pipes. So much noise is absorbed that a normal conversation can be carried on right at the sink *even while bones are being liquified.*

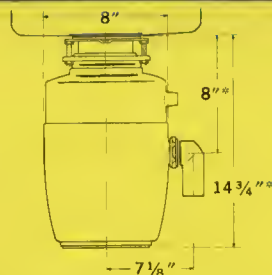

### OTHER OUTSTANDING WASTE KING MODEL SH7000 FEATURES:

Clog-proof moisture funnel — for motor protection . . . Easy to install — fewer mounting parts . . . Lowest Service Factor — less than 1% call-backs . . . Built-in dishwasher connection . . . Handsome sculptured styling in colorful turquoise . . . One Year Warranty.

**LIQUIFYING ACTION PLUS MAGIC SOUND BARRIER EQUALS . . . THE NEW WASTE KING SH7000 WHICH, WITH ADVANCED APPLICATIONS OF CENTRIFUGAL FORCE PLUS ACOUSTICAL SOUND ENGINEERING, DOES NOT NOISILY GRIND GARBAGE, BUT QUIETLY LIQUIFIES IT!**

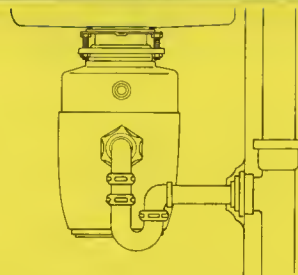

### INSTALLATION SPECIFICATIONS

For all purpose home and apartment installations, kitchen modernization and new construction.

Waste King Pulverator Model SH7000 fits any type of sink having a 3 1/2" drain opening — The weight of the Waste King is held in a flexible controlled compression mounting for quieter operation.

\*Add 1/2" where thin type sinks such as stainless steel or fabricated sinks are used.

"P" trap shown as typical wall waste line connection. Waste line from trap connects directly to stack in wall. Can also be installed with "S" trap floor waste line connection. Drain line from trap connects directly to stack under floor.

**ELECTRICAL CONNECTION** from the plug outlet to the terminal box of the unit should be made with 115 volt, AC Underwriters' approved wire. A toggle switch may be located on the wall within easy reach or inside the sink cabinet. The **PULVERATOR** can be used with septic tank or cesspools. (Detailed information will be furnished on request.)

#### MODEL SH7000

Shipping Weight approx. . . . .	26 lbs.
Net Weight . . . . .	24 lbs.
HP . . . . .	1/4
RPM . . . . .	1725
Frequency Cycles . . . . .	50 or 60
Volts . . . . .	115
Bearings . . . . .	Permanently Lubricated
Manual Re-set (Overload protection) . . . . .	Built into Motor

*"You know, it's more fun than ever to have company over. Now, getting rid of the mess afterward is so easy. You won't believe it, but my new Waste King Super Hush is on right now — getting rid of the celery stalks, corn cobs and bones for me . . . Liquifying them! Yes, I know you can hear me perfectly. My new Waste King has a Magic Sound Barrier plus new Liquifying Action. It's so fast, and so quiet. It's wonderful. You really should have one!"*
